SUBJECT INDEX

Abstraction reactions 6
Accuracy evaluation 383, 386, 390
Acid/base reaction 314
Adiabatic laminar flame 84–106
Algebraic stress model 182–3, 191
Alkylated aromatics
  high-temperature oxidation 12–19
  larger 18–19
Ammonia–air flame 94
Ammonia–air mixtures 95
Anion exchange, chlorine extractions using 137
Anion exchange reaction, chlorine–coal bond 136
Anthracene, oxidation of 21
Aqueous leaching experiments 128
Aromatic hydrocarbons, high-temperature oxidation 1–24

Benzene
  addition of O to 10
  high-temperature oxidation 7–12
  low-temperature oxidation 3
  pyrolytic ring rupture of 6
  reaction of OH with 10
  stoichiometric oxidation of 8
Boundary conditions 195–7, 318, 342, 348
Boussinesq hypothesis 176, 181
Branching bimolecular reaction 5
Bubble breakdown 168
Buoyancy 319
Buoyant flames 386
Butadienyl radical, oxidation of 11

Calcium acetate addition to coal 156
Calcium oxide addition to coal 155
Calorific value loss associated with loss of chlorine 124
Carbon–chlorine bond, polarisation of 136
Carbon monoxide flames 379
Carbon monoxide/air diffusion flames 311–12
Catalysis
  and combustion 25–41
    historical perspectives 26–7
Catalytic combustor
  catalysts and support materials 33–4
  fuel savings 38
  furnace installations 38
  new systems 38
  novel applications of 39
  potential applications of 38
  retrofit installations 38
  schematic of mechanisms in 32
  small gas turbine 33
  test rig 32
Catalytic igneslytic combustor, modelling of 36–8
Catalytic oxidation reactions 28
Catalytic oxidation reactors 27
  modelling of 36
Catalytic rate vs temperature 28
Catalytically stabilized combustion 29–39
  fundamental studies 34–6
Chloride
  alkali metal 118
  chlorine retention in coal as 154
  solubility in polar and non-polar solvents 136, 137

Chlorine
  aqueous leaching 128
  behaviour on heat treatment of coal 121–8
  calorific value loss associated with loss of 124
  loss in plasma ashing 143
  loss on prolonged heating 144
  occurrence in coal 117–62
  organic 126
  radioactive 153
  retained in fusain-enriched coal 134
  retention in coal as chloride 154
  take-up from perklone 138
Chlorine–coal bond, anion exchange reaction 136
Chlorine extractions, using anion exchange 137
Chlorine loss from plasma ashed coal samples 126
Chlorine–nitrogen compounds 125
C_μ modification 190
Coal
  analysis of ultrafine 131
  calcium acetate addition to 156
  calcium oxide addition to 155
  chlorine in
  see chlorine
  effluent gases from low-temperature heating of 125
  fusain-enriched 131–4
  impregnation with sodium chloride 142–54
  in contact with lead nitrate solution 139–40
  iron powder addition to 155
  leaching characteristics 135
  porosity assessment 138
  potassium carbonate addition to 155
  reaction with perklone 138
  reaction with sodamide 136
  vacuum impregnation of 152
Coal combustion cases 233–8
Coal dust particles 103
Coal powders, SEM/EDXA of 120–1
Combustion
  and catalysis 25–41
    historical perspectives 26–7
  heterogeneously catalyzed gas-phase 25
Combustion-driven oscillations 44, 46
Conservation checks 323
Constant-density mixing flows 261–72, 299
Cyclopentadienyl radical 11

Density data via laser Rayleigh scattering 349
Dirichlet condition 195
Dissipation rate effect 178
Dissipation source-term modifications 186
Dust–gas flame 104

Eddy viscosity correction 187
Eddy viscosity derivation 191
Eddy viscosity formulation 179
Effluent gases from low-temperature heating of coal 125
Energy-dispersive X-ray analysis (EDXA) 118, 144–6, 155, 156, 158
Energy equation 109–11
Equivalence ratio
  dimensionless number as function of 87
  flame thickness variation with 84
  vs quenching distance 93

Error analysis 282–3, 349–53
Ethylbenzene
  high-temperature oxidation 15–16
  low-temperature oxidation 3
Ethylene/air diffusion flames 313
Extinction limits
  effects of inhibitors 105
  heat loss at 109

Fast reaction criteria 307–15
Fast reaction nonpremixed combustion 305–72
Favre averages 320, 321
Flame burners, counterflow 95
Flame extinction 81–116
  action of acceleration 111–14
  downward propagating flame 89
  in large vessels 94
  in standard tube 88
  near-limit counterflow flames 95
  upward propagating flame 89
Flame front, temperature variation across 84
Flame parameters 87, 105
Flame propagation
  closed end of tube 90
  downward propagating 89, 111–14
  past obstacles 91
  purely thermal 85–6
  real flames 86–8
  upward propagating 89, 91, 111–14
    against steady downward gas flow 92
Flame quenching
  cold wall 92–4
  limit conditions by wall 106–11
Flame speeds, methane–air mixtures 93
Flame temperature measurement 321
Flame thickness 83–4, 94
  relevant dimensionless 85
  variation with equivalence ratio 84
Flammability limits 81, 82, 393
  effect of gravity 97
  influence of acceleration 97
  influence of chemically inert substances 101–2
  influence of initial temperature 101
  influence of pressure 99–101
  natural gas 100
  swirling flow 98–9
Flow definition 315–19
Forced vortex destabilization 189
Forced vortex stabilization 188
Free shear flows 265
Fuel–oxidizer mixture 82

Gas turbines
  automotive 38
  combustor emissions performance 33
Gibson–Launder model 197, 243
Gibson–Launder stress transport equations 205

Heat generation curve 28
Heat loss at extinction limit 109
Helmholtz pulse burner 48
Het code 37
High-speed photography 348
High-temperature oxidation
  alkylated aromatics 12–19
  aromatic hydrocarbons 1–24
  benzene 7–12
  ethylbenzene 15–16
  general chemical characteristics of 6
  general model for 19
  high-pressure 19–21
  historical perspective 2
  important characteristics 5
  long residence times 19–21
  phenyl radical 9, 12
  propylbenzene 16–18
  toluene 12–15
  use of term 6
Hydrocarbon flames 379
Hydrocarbon/air diffusion flames 312–14
Hydrogen flames 378
Hydrogen/air diffusion flames 309–11
Hydrogen–air mixtures 98
Hydrogen/fluorine diffusion flames 314
Hydrogen–oxygen–nitrogen mixtures 100
Hydroquinone, precursor to ring destruction 4

Igneslytic adiabatic catalytic combustor 30–3
Igneslytic combustion 29–30
Ignition limits 104–5
Inlet conditions 193, 302, 342
Inlet dissipation equations 194
Inlet perturbations 193
Inlet profiles 302
Inlet turbulence intensity 194
Iron powder addition to coal 155

Joint probability density distributions 292

Karavodine combustion chamber 46

Laser Doppler anemometry (LDA) 320–1, 342, 348, 3
Laser velocimeter 281
Laser velocimetry 282, 292
Leaching characteristics of low ash and low chlorine coals 135
Lead nitrate solution, coal in contact with 139–40
Lean mixtures 81
Limit flames
  behaviour of 94
  influence of different initial and boundary conditions 88–106
  thermal structure of 83
Limit mixtures 83
Line-of-sight emission 348
Longer-chained compounds 22
Low-temperature oxidation
  benzene 3
  ethylbenzene 3
  toluene 3
Lucas–Rotax Pulsamatic boiler 48

Mass balance checks 390
Mass balances 348
Mass-transfer-conversion-limited reaction 33
Mass transfer limitations 27
Methane–air mixtures 102, 105
  flame speeds 93
  upward and downward flame propagation 93
Methane burner assembly 386
Methane diffusion flames 387
Methane flame test apparatus 385
Methane–oxygen–nitrogen mixtures 102
α-Methylnaphthalene 12
Microwave plasma detection 125
Mixing layers 375
Mixture fraction measurements 283–9
Multiple-substituted single-ring compounds 22
Mushroom multispiral tail pipe resonant combustor 4

Naphthalene, oxidation of 21
Natural gas, flammability limits 100
Natural gas/air jet flame 385–9
Natural gas–air mixtures 100
Near-wall functional relationships 196
Neumann condition 195
Nitric acid plant catalytic gas turbine system 27
Nitric oxide/ozone diffusion flames 314
Nitrogen, in high vacuum impregnation of coal using aqueous sodium chloride 145
Nitrogen loss on heating coal 125
Nitrogen mole fractions 383
Nitrogen tetroxide dissociation 315
Nonreacting propane jet 281–97
Nonreacting turbulent mixing flows 257–303
NO_x emissions 56
Numerical diffusion 198

Peclet number 108, 111
Perklone
  chlorine take-up from 138
  coal reaction with 138
Peroxy radicals and high temperatures 4
Phenanthrene, oxidation of 21
Phenol, decomposition at high temperatures 11
Phenol-forming pathways 11
Phenoxy, thermal decomposition of 11
Phenyl radical
  formation of 10
  high-temperature oxidation 9, 12
Pitot probes 320–1
Plane free shear layers 336
Polycyclic aromatics with side chains 21
Potassium carbonate addition to coal 155
Prandtl–Kolmogorov relationship 179
Precessing vortex core (PVC) 169–72
  influence of combustion 170–1
Premixed combustion 393–405
Princeton University Adiabatic Flow Reactor 2, 7
Probability density distributions 291
Prof (Premixed One-Dimensional Flame) code 37
Propane, steady-state combustion of 37
Propane diffusion flames 380
Propane–air flames 389
Propane–air mixtures 98
Propane jet flames 380
Propylbenzene
  flow-reactor study of 16
  high-temperature oxidation 16–18
Pulse combustion 43–79
  historical review 46
  summation of history 55
Pulse combustors 43–79
  aerovalved 50–3, 67–75
    A/F ratio 70
    aerovalve concepts 68
    aerovalve length and shape 73
    aerovalve operation 69
    back pressure 71
    boost pressure 70
    combustor size 71–3
    coupling of 75
    frequency 75
    fuel flow rate 70, 71
    fuel inlet port size 74
    fuel manifold volume 74
    fuel pressure 71
    general operation 67–8
    multiple inlets 74
    operating characteristics 75
    resonance tube shape 73
  applications of 75
  comparison with combustion-driven oscillations 45
  double-chamber continuous-flow water heater 52
  early designs 46
  flapper-valved 46
  gas-fired residential 48
  general results 56–8
  heavy fuel-oil 52
  Helmholtz-type 48
  high-efficiency combustion chamber 52
  historic highlights 55
  mechanically-valved 49, 58–67
    applications 61
    flow and pressure 63–5
    flow control 59
    frequency 61–3
    general advantages and disadvantages 58
    general operation 59
    modulation 61
    noise 65–7
    operating characteristics 61–7
    starting 61
    valve types 59
  NO_x emissions 56
  operating phases 45
  pressure diagram in combustion chamber 58
  pressure–time histories 57
  pressure–time relationships 57
  pressure trace in combustion chamber 58
  principles of operation 45–56
  reed-valved 46
  research needs 75–6
  residential heating unit 48
  Reynst design 54
  Rijke tube 54
  rotary-valved 49
  Severyanin dipolar combustion chamber 53
  thrust units 46
  use of term 55
  with mixing chamber 52
Pulsed combustion, use of term 55
Pyrocatechol, precursor to ring destruction 4
Pyrolytic processes 5, 10

Quality control 348

Raman scattering system 282, 292, 347, 350, 383
Rayleigh criterion 44
Rayleigh scattering system 281–3, 347, 349
Recirculation zone 172
Reverse flow zone traits and trends 172–4
Reynolds averages 320
Reynolds number 167, 179, 338, 380, 382, 385
Reynolds stress transport equations 181, 244
Reynolds stress transport model 179–82
Reynolds stresses 175, 176, 182, 195, 225, 227, 259
Richardson number 187, 189, 190, 199, 210, 223, 224, 229, 239, 240, 242
Round free jets 324–36

Scanning electron microscopy (SEM) 118, 144–6, 155, 156, 158
Schmidt pulse burner 48
Slow chemistry nonpremixed flows 373–92
Sodamide, coal reaction with 136
Sodium chloride
  as radioactive tracer 152
  coal impregnation with 142–54
  effect of low temperature heating and plasma ashing 127
  in fusain enriched coal sections 131–4
  in mudrock and sandstone roof and floor strata 134

introduced by solution impregnation under vacuum 143
water extraction of carbonaceous samples before and after impregnation with 146
Sodium to chlorine ratio (SCR) 129–31
Stability limits 393
Static photographs 354
Streamline curvature corrections 186
Super-rich mixtures 81
Swirl level effect 173
Swirl model evaluation 200–42
case descriptions 200–42
data selections 200–7
future research 244–5
summary of comparisons 238
Swirl modeling 163–250
Swirl number 198
Swirl review and analysis 166–74
Swirl test cases 201
Swirling flow, corrections for 188
Swirling flowfields, model and equation formulation 175
Swirling jet flow 166
Syngas/air flame 380–5

Tail-gas reactor 27
Time-resolved photographs 355
Toluene
high-temperature oxidation 12–15
low-temperature oxidation 3
Tubular catalyst flow channel 29
Turbulence, quenching action of 95
Turbulence model constants 197
Turbulence models, standard two-equation 185
κ–ϵ-Turbulence model 176–9
Turbulent flow systems 163–250
Turbulent kinetic energy 178
Turbulent nonreacting flows 257–303
Turbulent reacting flows 373
evaluation of data on 253–5
Turbulent round jet diffusion flames 378

Vacuum impregnation of coal 152
Variable density mixing flows 274–81, 299
Velocity fluctuations 320, 349
Velocity measurements 289–93, 320–1, 349
Velocity profiles 303, 382
Very-high-temperature oxidation 19
Visualization 323
Vortex breakdown 167–9
Vortex characteristics 167

Wake structure 169
Wall boundary layers 337
Wave theory 171

Xylene, coal reaction with sodamide in 136

CONTENTS OF PREVIOUS VOLUMES

VOLUME 1

Pollution Formation and Destruction in Flames — Introduction
N. A. CHIGIER

The First Half-Million Years of Combustion Research and Today's Burning Problems
F. J. WEINBERG

Kinetics of Pollutant Formation and Destruction in Combustion
C. T. BOWMAN

Mathematical Modeling of Pollutant Formation
L. S. CARETTO

Mixing and Chemical Reaction in Continuous Combustion
D. T. PRATT

Turbulent Jet Diffusion Flames
R. W. BILGER

Gas Turbine Engine Pollution
A. M. MELLOR

Pollution Formation and Control in Spark-Ignition Engines
J. B. HEYWOOD

Analysis of Pollutant Formation and Control and Fuel Economy in Diesel Engines
N. A. HENEIN

VOLUME 2

NO_x Control for Stationary Combustion Sources
A. F. SAROFIM and R. C. FLAGAN

The Characterization and Evaluation of Accidental Explosions
R. A. STREHLOW and W. E. BAKER

Fluidized Bed Combustion of Coal for Power Generation
D. ANSON

Combustion and Heat Transfer in Large Boiler Furnaces
A. M. GODRIDGE and A. W. READ

The Atomization and Burning of Liquid Fuel Sprays
N. A. CHIGIER

Fossil Energy Research and Development in ERDA
P. C. WHITE

Flaring in the Energy Industry
T. A. BRZUSTOWSKI

Turbulence and Turbulent Combustion in Spark-Ignition Engines
R. J. TABACZYNSKI

Fundamentals of Oil Combustion
A. WILLIAMS

Geothermal Energy Development
H. C. H. ARMSTEAD

Combustion Fundamentals Relevant to the Burning of Natural Gas
P. F. JESSEN and A. MELVIN

VOLUME 3

The Use of Laser Raman Diagnostics in Flow Fields and Combustion
S. LEDERMAN

Gasification: Theory and Application
K. LITTLEWOOD

Non-Electrical Uses of Geothermal Energy
E. BARBIER and M. FANELLI

The Gas-Phase Oxidation of Hydrocarbons
G. MCKAY

Synthetic Fuels and Combustion
J. P. LONGWELL

Future Fuels and Mixture Preparation Methods for Spark Ignition Automobile Engines
W. BERNHARDT

Molecular Beam Mass Spectrometry for Studying the Fundamental Chemistry of Flames
J. C. BIORDI

Instrumentation Techniques for Studying Heterogeneous Combustion
N. A. CHIGIER

Current Status of Droplet and Liquid Combustion
G. M. FAETH

A Review of Drop Size Measurement — The Application of Techniques to Dense Fuel Sprays
A. R. JONES

Propagation of Laminar Pulverized Coal — Air Flames
L. D. SMOOT and M. D. HORTON

VOLUME 4

Laminar and Turbulent Gas Dynamics in Combustors — Current Status
R. B. EDELMAN and P. T. HARSHA

Nuclear Process Heat for Coal Gasification and Hydrogen Production
K. F. KNOCHE

Gas Turbine Engine Emissions — Problems, Progress and Future
R. E. JONES

Fifty Years of Combustion Research at General Motors
W. G. AGNEW

Combustion Noise
W. C. SRAHLE

Future Jet Fuel Combustion Problems and Requirements
W. S. BLAZOWSKI

Reducing Inefficiency and Emissions of Large Steam Generators in the United States
B. P. BREEN and J. G. SOTTER

Heterogeneous Kinetics of Coal Char Gasification and Combustion
N. M. LAURENDEAU

VOLUME 5

Mineral Matter in Coal and the Thermal Performance of Large Boilers
T. F. WALL, A. LOWE, L. J. WIBBERLEY and I. MCC. STEWART

Coal Dust Flames: A Review and Development of a Model for Flame Propagation
JOHN L. KRAZINSKI, RICHARD O. BUCKIUS and HERMAN KRIER

Scattering of Electromagnetic Radiation in Particulate Laden Fluids
A. R. JONES

Combustion Modeling in Two and Three Dimensions — Some Numerical Considerations
HENRY MCDONALD

Phenomenological Models for Reciprocating Internal Combustion Engines
PAUL N. BLUMBERG, GEORGE A. LAVOIE and RODNEY J. TABACZYNSKI

Research and Development by British Gas into the Effective Use of Gas in Industry
M. L. HOGGARTH

***In Situ* Combustion Retorting of Oil Shale**
MELVYN C. BRANCH

Basic Considerations in the Turbulent Flame Propagation in Premixed Gases
JERZY CHOMIAK

Particulate Formation in Power Station Boiler Furnaces
M. A. NETTLETON

Incineration of Industrial Waste
R. K. TANNER

Combustion Diagnostics by Laser Raman and Fluorescence Techniques
ALAN C. ECKBRETH, PAUL A. BONCZYK and JAMES F. VERDIECK

VOLUME 6

Solar Collectors for Low and Intermediate Temperature Applications
F. KREITH, G. O. F. LOF, A. RABL and R. WINSTON

Nitric Oxide Formation from N_2 in Flames: The Importance of "Prompt" NO
A. N. HAYHURST and I. M. VINCE

The Trace Element Chemistry of Coal During Combustion and the Emissions from Coal-Fired Plants
R. D. SMITH

Unconfined Vapour-Cloud Explosions: Definition of Source of Fuel
D. J. LEWIS

Spread and Evaporation of Liquid
F. BRISCOE and P. SHAW

Methods for Predicting the Atmospheric Dispersion of Massive Releases of Flammable Vapour
R. A. COX

Unconfined Vapour-Cloud Explosions — Historical Perspective and Predictive Method Based on Incident Records
D. J. LEWIS

Risk Assessment Methods for Vapour-Cloud Explosions
L. CAVE

Catalysts for Automobile Emission Control
J. T. KUMMER

Fundamental Coal Combustion Mechanisms and Pollutant Formation in Furnaces
J. O. L. WENDT

The Hydropyrolysis of Coal to BTX
G. FYNES, W. R. LADNER and J. O. H. NEWMAN

Airblast Atomization
A. H. LEFEBVRE

Soot Control By Fuel Additives
J. B. HOWARD and W. J. KAUSCH, JR

A Review of Combustion Processes in the Dual Fuel Engine — The Gas Diesel Engine
G. A. KARIM

Post Combustion Methods for Contol of NO_x Emissions
H. S. ROSENBERG, L. M. CURRAN, A. V. SLACK, J. ANDO and J. H. OXLEY

The Determination of Laminar Burning Velocity
C. J. RALLIS and A. M. GARFORTH

Perspectives for Metal Hydride Technology
H. BUCHNER

Semi-Empirical Correlations for Gas Turbine Emissions, Ignition and Flame Stabilization
A. M. MELLOR

The Mechanisms of Transition from Deflagration to Detonation in Vapor Cloud Explosions
J. H. S. LEE and I. O. MOEN

VOLUME 7

Detailed Modelling of Combustion Systems
E. S. ORAN and J. P. BORIS

Mechanisms of Heat Transfer Between a Surface and a Gas-Fluidized Bed for Combustor Application
S. C. SAXENA and J. D. GABOR

A Review of Initial Comparisons of Computed and Measured Two-Dimensional Unsteady Flame Fields
F. V. BRACCO and P. J. O'ROURKE

The Kinetics of Thermochemistry of Chemical Oxidation with Application to Combustion and Flames
S. W. BENSON

Product Formation Mechanisms Inside a Burning Cigarette
R. R. BAKER

Automotive Engines and Fuels: A Review of Future Options
J. B. HEYWOOD

Solar Cooling and Air Conditioning
G. GROSSMAN and A. JOHANNSEN

Soot Formation
B. S. HAYNES and H. GG. WAGNER

Fundamentals of Soot Formation in Flames with Application to Diesel Engine Particulate Emissions
O. I. SMITH

Multidimensional Numerical Simulation of Reactive Flow in Internal Combustion Engines
T. D. BUTLER, L. D. CLOUTMAN, J. K. DUKOWICZ and J. D. RAMSHAW

VOLUME 8

Modeling of Unsteady Two-Phase Reactive Flow in Porous Beds of Propellant
S. S. GOKHALE and H. KRIER

Flame Radiation
C. L. TIEN and S. C. LEE

Fuel Atomization for Spray Modelling
M. M. ELKOTB

Counterflow Diffusion Flames
H. TSUJI

Sunfuels
R. J. KING

Production and Use of Biogas in Agriculture
P. N. HOBSON and N. E. H. FEILDEN

Turbulent Hydrocarbon Jet Flames
H. EICKHOFF

Recent Advances in Droplet Vaporization and Combustion
C. K. LAW

Conditional Sampling in Turbulent Combustion
P. A. LIBBY, N. CHIGIER and J. C. LARUE

Liquid Fuels for Transport
E. M. GOODGER

Sulphate Capture in Ash and Boiler Deposits in Relation to SO_2 Emission
E. RAASK

Coal Gasification—Combined Cycles for Electricity Production
T. D. BROWN

Entrainment Interface in Free Turbulent Shear Flows
R. CHEVRAY

Urban and Wildland Fire Phenomenology
F. A. WILLIAMS

VOLUME 9

Evaporation and Combustion of Sprays
G. M. FAETH

Critical Requirements in Combustion Research
L. D. SMOOT and S. C. HILL

Turbulence Properties of Flames and their Measurement
R. GUNTHER

Drop Size and Velocity Instrumentation
N. CHIGIER

Heat Pumps — Applications for Heating Conservation and Heat Recovery
E. NEAL

Toxicology of Soot
T. R. BARFKNECHT

A Perspective of Reciprocating-Engine Diagnostics without Lasers
C. A. AMANN

The Role of Pore Structure in Coal Pyrolysis and Gasification
G. A. SIMONS

Fuel Droplet Vaporization and Spray Combustion Theory
W. A. SIRIGNANO

Finding Order in Coal Pyrolysis Kinetics
P. R. SOLOMON and D. G. HAMBLEN

VOLUME 10

Chemical Kinetic Modelling of Hydrocarbon Combustion
C. K. WESTBROOK and F. L. DRYER

Thermal Radiation Hazards from Hydrocarbon Pool Fires
K. S. MUDAN

Coal Combustion and Applications
A SPECIAL ISSUE PREPARED BY THE DOE COAL COMBUSTION AND APPLICATIONS WORKING GROUP

Heat and Mass Transfer in Combustion: Fundamental Concepts and Analytical Techniques
C. K. LAW

Laminar Diffusion Flamelet Models in Non-Premixed Turbulent Combustion
N. PETERS

Small Industrial-Scale Producer Gas Units
A. BLIEK, W. P. M. VAN SWAAIJ and K. R. WESTERTERP

Pulverized-Coal Combustion Research at Brigham Young University
L. D. SMOOT, P. O. HEDMAN and P. J. SMITH

VOLUME 11

Dynamic Behavior of Premixed Flame Fronts in Laminar and Turbulent Flows
P. CLAVIN

Fuel Combustion in the Blast Furnace Raceway Zone
J. M. BURGESS

Theory of Normal Premixed Turbulent Flames Revisited
P. A. LIBBY

The Mode of Occurrence and Concentration of Trace Elements in Coal
E. RAASK

Pdf Methods for Turbulent Reactive Flows
S. B. POPE

Particulate Removal from High-Temperature, High-Pressure Combustion Gases
S. C. SAXENA, R. F. HENRY and W. F. PODOLSKI

Chemical–Acoustic Interactions in Combustion Systems
E. S. ORAN and J. H. GARDNER

Modeling of Smoldering Combustion Propagation
T. J. OHLEMILLER

Non-Ideal Equations of State for Combusting and Detonating Explosives
S. Y. WANG, P. B. BUTLER and H. KRIER
